

ROBUST EXCELLENCE IN AUSTRIAN SALT MINES

For Austrian salt manufacturer Salinen the extraction of salt from salt mines deep within the Haselgebirge rock is a process that requires the best and most robust equipment.

Grundfos was chosen as pump supplier because of the SP pumps' excellent ability to handle aggressive media. Moreover, the lightweight of the SP pumps make them easily transportable which is important as they must be carried through long and small tunnels to get to the boreholes – sometimes a few kilometres.

The SP pumps are installed in wells several hundred meters deep and help extract the concentrated salt brine. These are harsh conditions and as there are many SP pumps in operation access to replacement parts is as important as the long life of the product.

“We have worked with Grundfos for years and know them to be a very reliable partner – and we will continue to make use of their know-how in the future”, says Franz Rastl from Salinen Austria.

Grundfos supplied

- 2 SP 77-11N
- 4 SP 46-6N
- 4 SP 30-17N
- 17 SP 17-7N
- 11 SP 14-14N
- 5 SP 14-18N
- 5 SP 8-5N
- 60 CR(N) pumps used for water supply and distribution
